

Porta la Laurea in azienda – Internship proposal

Company	EDMAKTUB Association
Website	www.edmaktub.org
Internship location	Spain - Vilanova i la Geltrú
Areas of interests	This internship is designed for students coming from Biology, Natural Science, Veterinary and Oceanography which wish to get experience on cetacean research.
Requirements / preferences	English level B2 Basic knowledge regarding cetaceans in the Mediterranean. We recommend people interested to go through our webpage and read the 2022/2023 report.
Description of the internship proposal	The participants will join the research team of the Fin Whale Project. This project is a pioneer study aiming to improve the fin whale knowledge in the study area, using new technologies such as drones and thermal cameras. The internship will be mainly carried out during the field work of the fin whale project, from February to June. Each participant will focus in one research line carrying out a small project during their stay but also learning about all the research done by the other team members being open to help out with whatever is needed in the team. The research line and the objectives of the internship will be set before closing the candidature so the intern will know more accurately what to expect and the work that will be done during the internship. The main activities for the participants will be; joining the research campaigns at sea (usually 3 to 5 days per week) and working in the office on their research duties the days that it's not possible to go out at sea. The main goal of this internship is that the participants get a general overview of a cetacean research project getting experience on the main techniques used for cetacean research, and more particularly to their main research line, as well as getting sailing notions.
