
Matteo De Gerone

Personal data

- Place and date of birth: 
- Citizenship: Italian.
- Mother tongue: italian.
- Other languages: english.

Education and professional career

- 03/2017 - now, **Researcher (III Professional level)** at the National Institute of Nuclear Physics (Istituto Nazionale di Fisica Nucleare - INFN), Genoa Division.
- 07/2016 - 03/2017, **Temporary Researcher (RTDA)** at Genoa University.
- 11/2015 - 03/2016, **Term contract worker (Co. Co. Co. Art. 2222)** funded by INFN for MEG Engineering Run.
- 10/2013 - 10/2015, **Research grant** funded by INFN at the at the National Institute of Nuclear Physics (Istituto Nazionale di Fisica Nucleare - INFN), Genoa Division for the research project: “Time of flight detectors for the MEG experiment”.
- 06/2012 - 06/2013, **Post Doc Fellowship** at Paul Scherrer Institute, Villigen (CH).
- 05/2011 - 06/2012, **Research Grant** at Rome University “La Sapienza” for the research project: “Search for lepton flavor violation in the $\mu \rightarrow e\gamma'$ decay”.
- 01/2008 - 12/2010: **PhD degree in Physics, Genoa University.**
Discussion of the thesis: “Searching for the rare muon decay $\mu \rightarrow e + \gamma$: the problem of the high resolution measurement of positron timing”.
Advisors: Prof. Flavio Gatti, Prof. William Molzon.
- 2007: **Master degree in Physics, Genoa University.**
Discussion of the thesis: “Sviluppo del rivelatore a fibre scintillanti per l’esperimento MEG” (in italian).
Advisor: Prof. Flavio Gatti
Graduation grade: 108/110

Research activity

My research activity started with my master degree thesis in the context of the MEG experiment. In my thesis work, I dealt with the development of a fiber-scintillating and Avalanche Photodiode based detector. I carried on my activity during my PhD thesis, working on the development, the characterization and the calibration of the Timing Counter detector (TC). The TC is made by 2 arrays of scintillating bars read out on each side by a couple of photomultiplier tubes. The purpose of the detector is a high resolution measurement (~ 60 ps) of the positron time of flight in the $\mu \rightarrow e + \gamma$ decay. In particular, I developed a calibration algorithm which allowed to considerably reduce the time walk contribution to the overall time resolution, thus substantially improving the detector performances.

Since 2009 I have been appointed Detector Expert for the TC detector, with specific responsibility for the calibration and the operations of the detector during all the MEG physic runs (2009 - 2013). Moreover, I contributed to the physic runs also as shift coordinator (2011 - 2013).

The MEG experiment completed data taking in 2013 improving the upper limit on the $\mu \rightarrow e + \gamma$ decay down to 4.2×10^{-13} . I contributed to the global analysis by studying the time difference of the positron and gamma times of flight.

Since 2013, an intensive R&D work has been carried on in order to improve the detector experimental sensitivity. Especially, the TC detector has been completely re-designed with a new layout based on small (~ 100 cm²) scintillating tiles ("pixels") coupled to Silicon Photomultiplier arrays in series connection. I was co-responsible (together with colleagues from Tokyo University) for the new detector development and commissioning. I designed, assembled and tested many detector prototypes, working on the detailed characterization of both silicon photomultipliers and scintillators.

The prototypes were tested in frameworks similar to the experimental one during several beam tests (at the Beam Test Facility in Frascati in 2013 - 2014 and at the Paul Scherrer Institute in 2013-2016).

The Timing counter commissioning has been completed in 2016 and the detector has been already operated during MEG II engineering run in 2017 - 2020 and during the first MEG II physics run in 2021. Since July 2016, I was appointed as local responsible for the Genoa INFN group. Since May 2019, I was appointed as Italian Responsible for the Timing Counter detector. Thanks to the experience gained in high resolution timing measurement field I have been appointed as Referee for the TOTEM (TOTAl cross section, Elastic scattering and diffraction dissociation Measurement at the LHC) experiment for the 1st INFN Scientific Committee. TOTEM's physics program is dedicated to the precise measurement of the proton-proton interaction cross section, as well as to the in-depth study of the proton structure. In particular, TOTEM colleagues were working on a diamond based timing detector developed for the high resolution time measurement of the extreme high energy proton (expected time resolution is ~ 50 ps).

I have also been interested in the study and characterization of scintillating materials for various application, with a special focus on time of flight applications and calorimetric applications. As an example, in the last few years I worked on the investigation of para-terphenyl as medium for a extremely fast time of flight detector. Moreover, I worked on the characterization of a cylindrical $3'' \times 3''$ LaBr₃:Ce crystal to assess the feasibility of a high-performance calorimeter for future lepton flavor violation experiments.

Since February 2014 my research activity has been also extended to the measurement of neutrino mass. Indeed, I joined the HOLMES collaboration (ERC Advanced Grant 2013 No. 340321), which aims to perform a direct calorimetric measurement of the electronic neutrino mass by studying the electronic capture spectrum of the ¹⁶³Ho. The experiment takes advantage from the usage of cryogenic microcalorimeters implanted with the isotopic species whose spectrum is to be studied. Within the HOLMES collaboration I initially attended (in collaboration with a specialized company, DAN-FYSIK) to the design of an implanter machine with the function of implanting the ¹⁶³Ho within the microcalorimeters. The machine also performed an isotopic separation in order to exclude other isotopic species with mass around 163 a.m.u. that can generate a background for calorimetric measurement. My contribution in the HOLMES collaboration gradually increased over the time until I was appointed, in July 2016, local responsible of the HOLMES Genoa group.

Positions of responsibility

- 2019 - now: **Italian Responsible** of the MEG II Timing Counter.
- 2016 - now: **Local responsible** of the MEG Genoa group. Total budget: 40 k€per year
- 2016 - now: **Local responsible** of the HOLMES Genoa group. Total budget: 25 k€per year
- 2015 - 2022: **Referee of the 1st INFN Scientific Committee** for the TOTEM experiment.
- 2015 - now **Shift coordinator** during MEG II physics runs.
- 2014 - now: **Responsible for the ion implanter commissioning** for the HOLMES experiment.
- 2013 - now: **Co-responsible** (responsibility shared with Tokyo University group) **for the development of the Timing Counter of the MEG II experiment.**
- 2011 - 2013: **Shift coordinator** during MEG physics runs.
- 2009 - 2013: **Expert on call for the Timing Counter detector.**

Grants and awards

- 2016: winner of the INFN grant: “Per attività di formazione, per sostenere progetti di ricerca dei giovani ricercatori” with the project “SPPD: scintillating pixels for particle detection”. Total funding 20k€.

Organization of International conferences

- Member of the Scientific and Local Organization Committee for the “ ν Mass 2022 - Determination of the absolute electron (anti)neutrino mass”, 6 - 10 June 2022, Milano”. Italy;
- Member of the Scientific and Local Organization Committee for the “18th international Workshop on Low Temperature Detectors. Cryogenic detectors for radiation and particles, and their applications, LTD18”, 22 - 26 July 2019, Milano. Italy.

Teaching experiences

- A.A. 2008/2010: Teaching fellow in General Physics, Computer Engineering Department, Genoa University.
- A.A. 2016/2023: Teaching fellow in Experimental Physics (Laboratorio 2), Physics Department, Genoa University.
- A.A. 2016/2017: Assistant Professor in General Physics, Computer Science Department, Genoa University.

Outreach activities

- 2015 - member of the Local Committee of Pint of science
- 2019 - now : involved in the ”AggiornaMenti”, project dedicated to show primary school teachers some simple experiment to be repeated in their classroom
- 2021 - now : collaboration with the ”Asimov prize for scientific publishing”.
- 2023 - now : Local responsible for the ”HOP - Hands on Physics” project.

Partecipazioni a scuole e conferenze

- Frontier Detectors for Frontier Physics, 15th Pisa Meeting on Advanced Detectors, La Biodola, Isola d’Elba (2022, Italy), Presentazione del poster “Development and commissioning of the ion implanter for the HOLMES experiment”.
- LP2021 30th International Symposium on Lepton Photon Interactions at High Energies, Manchester, (UK, 2022, on-line), Presentazione orale su invito “Status of the MEG II experiment at PSI”.
- 19th International Workshop on Low Temperature Detector, Boulder, (Colorado, USA, 2021, on-line), Presentazione del poster “Status of the HOLMES experiment”.
- 19th International Workshop on Low Temperature Detector, Boulder, (Colorado, USA, 2021, on-line), Presentazione del poster “Commissioning of the ion implanter for the HOLMES experiment”.
- 20th Lomonosov conference on elementary particle physics, Moscow (Russia, 2021, online), Presentazione orale (on-line) su invito “A direct neutrino mass measurement with ^{163}Ho : the HOLMES experiment”.
- 18th International Workshop on Low Temperature Detector, Milan, (Italy, 2019), Presentazione del poster “ ^{163}Ho distillation and implantation for the HOLMES experiment”.
- 19th Lomonosov conference on elementary particle physics, Moscow (Russia, 2019), Presentazione orale su invito “An experimental review of charged lepton flavour violating experiments: the muon channel”.

- ECT* workshop: Determination of the Effective Electron (anti)-neutrino Mass, Trento (2018, Italy) Presentazione del poster “ ^{163}Ho distillation and implantation for the HOLMES experiment”.
- Frontier Detectors for Frontier Physics, 14th Pisa Meeting on Advanced Detectors, La Biodola, Isola d’Elba (2018, Italy), Presentazione dei poster “ ^{163}Ho distillation and implantation for the HOLMES experiment” e “Probing the absolute neutrino mass scale with the Ho-163: the HOLMES project”.
- TAUP2017, XV International Conference on Topics in Astroparticle and Underground Physics, Sudbury (2017, Canada), Presentazione orale “Probing the absolute neutrino mass scale with the Ho-163: the HOLMES project”.
- Frontier Detectors for Frontier Physics, 13th Pisa Meeting on Advanced Detectors, La Biodola, Isola d’Elba (2015, Italy), Presentazione orale “A high resolution Timing Counter for the MEG II experiment”.
- NOW 2014, Neutrino Oscillation Workshop, Otranto (Italy, 2014), Presentazione orale su invito “Probing the absolute neutrino mass scale with ^{163}Ho : the HOLMES project”.
- PASCOS 2013, 19th International Symposium on Particles, Strings and Cosmology, Taipei (Taiwan, 2013), Presentazione orale “The MEG experiment at PSI: recent results and outlook”.
- MENU 2013, 13th International Conference on Meson-Nucleon Physics and the Structure of the Nucleon, Rome (Italy, 2013), Presentazione orale su invito “The MEG experiment at PSI”.
- IPRD 2013, 13th Topical Seminar on Innovative Particle and Radiation Detectors, Siena (Italy, 2013), Presentazione orale “An extreme high resolution Timing Counter for the MEG upgrade”.
- 2013 Nuclear Science Symposium, Seoul (2013). Presentazione del poster: “Properties of single crystal para-terphenyl as medium for high resolution TOF detector”.
- CIPANP 2012, Eleventh Conference on the Intersections of Particle and Nuclear Physics, St.Petersburg (USA, 2012), Presentazione orale “Latest results from the MEG experiment”.
- Incontri di Fisica delle alte Energie, Ferrara (2012), Presentazione orale “Last results from the MEG Experiment”.
- Flavour Physics and CP violation 2011, Kibbutz Maale Hachamisha (2011), Presentazione orale su invito “ $\mu \rightarrow e\gamma$ and $\mu \rightarrow eee$ status and perspectives”.
- 2010 Nuclear Science Symposium, Knoxville (2010). Presentazione del poster: “The Timing Counter of the MEG Experiment: Design and commissioning”
- XCV Congresso Nazionale della Società italiana di Fisica, Bari (2009), Presentazione orale “The Timing Counter of the MEG Experiment”.
- International School of Physics “E. Fermi” (Measurement of neutrino mass), Varenna (2009).
- New Development in Photodetection, Aix-Les-Bains (2009). Presentazione del poster: “Development and characterization of scintillating fiber-APD based detector”.
- XVIII Giornate di Studio sui Rivelatori, Villa Gualino (2008).
