skills covered

august 2018 - december 2018
Introduction to earth building: material to constructive practice
Building with earth: applied technologies and projects
Pontificia Universidad Catolica de Chile Continuing Education Programs
120 hours - 20 CFP
Distinguish the most common construction systems in Chile in terms of their structural behaviour, components and main characteristics. Diagnose the state of preservation of earthen buildings with critical survey methods. Analyse the relevance of the seismic factor in earth construction in Chile, both in construction practice and in the current regulatory context. Establish criteria for intervention on earthen heritage structures. Identify the composition of different soils, recognising those most appropriate for use in construction. Identify the relevance of the application of different construction systems according to the context of each project, in relation to current regulatory standards. Define the processes necessary for the development of different earth construction systems. Develop a project involving earth as a construction material. The scope of the project definition will be defined according to the professional profile of each student.

MIUR (Ministero dell'Istruzione italiano)

validation of the title of architect under the D.leg.vo 206/07

Date (from - to)	october 2003 - july 2009
Name and type of organisation providing education and training	Università della Svizzera Italiana - Accademia di Architettura di Mendrisio
Duration of the program of study	Master Degree in Architecture 6 years
Principal subjects/occupational skills covered	Architects today are called on to develop innovative forms of competence to enable them to work on different fronts, from the design of individual buildings to planning regional development, from the reuse of the historical legacy to the redevelopment of the landscape, from eco-friendly buildings to aesthetic exercises applied to different architectural typologies. For this reason Mendrisio has created an interdisciplinary teaching model that goes beyond the traditional specializations so as to train architects who are both humanists and generalists as required by the times. Practical work in the design studios is combined with technical-scientific courses which explore contemporary problems and historical-humanistic courses which investigate historical, artistic, philosophical, critical and sociological issues. Its educational model ensures that future architects acquire an architectural culture with an open, critical, relevant approach. As their studies progress they can choose ways to explore the approaches to architecture best suited to their individual sensibilities.
Title of qualification awarded	Master of science in Architecture
Final mark obtained	9/10
Date (from - to)	july 2008 - september 2008
Name of firm/university	Accademia di Architettura Mendrisio (CH)

Graduation thesis

Title	Lausanne Metamorphose - Student Apartaments - Wood construction
Name and type of organisation providing education and training	Accademia di Architettura di Mendrisio
Supervisor	Christian Sumi (Burkhalter Sumi Architekten)
Language	italian - english
Thesis Summary	the thesis' project site is Le Vallon, an urban valley really close to the city centre and the university hospital. The idea was to work with the strong topography creating a series of terraces, as is usual to be founded in the surrounding of Lausanne. The typology of the apartaments follows the logic of wood construction.
